Professional Summary

Computer graduate with **AWS certifications** and a focus on **DevOps and cloud infrastructure**. During my **DevOps internship**, I worked with Go, Docker, and Linux, and I've since built my own lab to work with Kubernetes, CI/CD, monitoring, and GPU-based model serving. I enjoy understanding how different systems work together and how large tech companies manage their infrastructure. I also like figuring out what causes problems and finding practical ways to solve them. I'm looking for a **DevOps or Cloud Engineer** role where I can work on real infrastructure problems and continue building my skills.

Skills

Cloud & DevOps	AWS Services, Linux, Docker, Kubernetes, Git, GitHub Actions, Jenkins, CI/CD, Terraform, Nginx, Traefik
MLOps	KServe, Kubeflow, Inference Engines (NVIDIA Triton Server, vLLM), ONNX, TensorRT
Observability	Prometheus, Grafana, OpenTelemetry, Loki, Tempo
Networking	Networking Layers, DNS, TLS, Reverse Proxies, Container Networking, VPNs, Load Balancing
Programming & Databases	Python, Go, Bash, C/C++, PostgreSQL, Microsoft SQL Server

Certifications

AWS Certified Cloud Practitioner (CLF-C02) **Oct. 2026**

AWS Certified AI Practitioner (AIF-C01) **Sep. 2026**

Experience

Cloud, DevOps & MLOps Home Lab **Sep. 2026 – Present**

Personal Projects *Toronto, Canada*

- Set up **Kubernetes cluster** on my own server and used **AWS EKS** to run my workloads and projects.
- Configured **Traefik** as a reverse proxy and compared it with **Nginx** in my infrastructure.
- Built a **CI/CD pipeline** from scratch using GitHub Actions to automate testing, Docker image builds, publishing, and deployment.
- I used **NVIDIA Triton Server and vLLM** in two separate pods and worked on **sharing GPU** resources between them. Triton was used to serve YOLOv12, while vLLM was used to run Qwen3:8B.
- Added **Prometheus** and **Grafana** for collecting metrics and building dashboards, alongside Loki, Tempo, and OpenTelemetry. These tools helped me find issues and improve my GPU utilization by **2 percent**.

DevOps Intern **Jun. 2024 – Oct. 2024**

Payam Pardaz – Sadra Cloud Team *Isfahan, Iran*

- Developed backend services in **Go** and gained hands-on experience with **microservices architecture**, Docker, and Linux environments.
- Worked as part of the R&D team, exploring **cloud-native technologies** and service communication.
- Used **HashiCorp Vault** to manage application secrets, implementing both Vault-based and in-memory secret storage.
- Configured **MOSN** as a proxy for communication between microservices, tested request routing, and troubleshot connectivity and configuration issues.
- Used Linux tools, Docker logs, and network diagnostics to identify and resolve issues during development and integration testing.

Projects

Career – AI-Powered Career Management Platform [Private Repo] **Oct. 2026 – Present**

- Started with the idea of building a system that could store my personal knowledge base and use that information to automatically update my portfolio website and other resources.
- Used AI techniques like **embeddings** and **Retrieval-Augmented Generation (RAG)** to help write and adjust my resume for different jobs and positions, as well as write cover letters.
- Built features to create resumes and keep track of my applications, both for jobs and educational programs.

Manisa – Business Management Platform [Public Repo] **Sep. 2026 – Present**

- Set up and managed the **CI/CD pipeline** to automate application delivery. Used Codex agents for configuration and development while working to improve the pipeline steps, reduce manual work, and keep deployments consistent.
- Started with my own Hetzner server and later migrated Manisa to AWS using **EC2 instances and EKS**. I also used GitHub Actions to automate deployment.
- Used **Grafana and Prometheus** to monitor the application and check its performance.
- Automated backups of the **S3 bucket** and used different S3 storage tiers to lower storage costs.

DuoCardsDict – Vocabulary Learning Platform [Public Repo] **May. 2026 – Sep. 2026**

- Developed a system that extends the DuoCards application, enabling users to collect all their vocabulary from the app in one place.
- Used **vector embeddings** to represent vocabulary words and help users practice spelling through dictation exercises in different modes.
- Worked on the **cloud** infrastructure for the application.

Flight Reservation Data Warehouse [Public Repo] **Jun. 2025 – Aug. 2025**

- Built a flight reservation database project in **Microsoft SQL Server**, separating transactional data from the tables used for reporting. Designed the database and its relationships, used a **star schema** for the data warehouse, and generated reports to display in Power BI.
- Wrote **SQL** and **Python scripts** to generate test data, transform records, and load them into the warehouse.

Teaching Experience

Teaching Assistant – Computer Engineering **Mar. 2024 – Jan. 2026**

Isfahan University of Technology *Isfahan, Iran*

- Assisted instructors across several Computer Engineering courses, including Computer Networks, Network Laboratory, IT Project Management, and Fundamentals of IT.
- Helped students configure Cisco routers and switches, create VLANs, set up routing, and diagnose network connectivity problems during laboratory sessions.
- Reviewed assignments and projects, answered technical questions, and assisted with grading and course materials.
- Also supported Scientific and Technical Presentation, Microprocessor, and Digital Systems Design Laboratory, working with students on presentations, embedded systems, and lab exercises.

Education

B.Sc. in Computer Engineering **2021 – 2026**

Isfahan University of Technology *Isfahan, Iran*

- GPA: **89/100**
- Relevant Coursework: Computer Networks, Operating Systems, Database Systems, Software Engineering, IT Project Management, Network Laboratory

Volunteer

Public Relations Coordinator **Feb. 2024 – May 2025**

Computer Engineering Scientific Association (IUT CESSA)

- Coordinated outreach to obtain permissions, raised funds, and secured sponsorships for events.
- Took one of my friends' ideas to celebrate Open Source Day at our university and helped turn it into a large national event focused on IoT and open-source technologies, with well-known speakers and **over 870 attendees**.

Co-Head **Mar. 2024 – Oct. 2024**

APACHEE Club, Isfahan University of Technology

- Helped the club chairman organize cybersecurity events and worked with the team to manage the first edition of the CTF competition.
- Got sponsorship from a well-known tech company in Isfahan to hold the in-person Escapache CTF event for younger students in the faculty.

Branding Manager **Feb. 2023 – Jan. 2024**

AICup National AI Competition

- Managed event branding on LinkedIn, Telegram, and Instagram with a team and helped promote the international AICup competition.
- Built the first Telegram bot to automate messages and used Telegram as one of the main platforms for promoting the event.
- Our promotional work helped attract **more than 100 teams** from across the country to participate in the competition.

Executive and Branding Team Member **Jan. 2023 – Feb. 2023**

IUT ACM Student Chapter

- Worked with the event staff and branding team to promote the competition, which attracted **over 300 participants**.
