Profile

I'm a Computer Engineering graduate focused on cloud computing, DevOps, and MLOps. I build and troubleshoot Linux-based services, automate delivery with Docker, Kubernetes, and GitHub Actions, and develop applied AI solutions using local model serving, embeddings, and RAG. My cloud/backend internship and personal infrastructure projects give me hands-on experience connecting applications, infrastructure, and observability.

Technical Skills

Cloud & Delivery: AWS | Kubernetes | Docker | Terraform | GitHub Actions | Jenkins | Linux | Git

Applied AI & MLOps: KServe | Kubeflow | NVIDIA Triton | vLLM | ONNX | TensorRT | YOLOv12 | RAG | Embeddings

Observability: Prometheus | Grafana | OpenTelemetry | Loki | Tempo

Networking & Systems: TCP/IP | DNS | TLS | HTTP/HTTPS | Cisco | VLANs | Routing | Switching | Nginx | Traefik | VPNs

Programming & Software Development: Python | Go | Bash | C/C++ | SQL | HTML | CSS | Qt | Git

Engineering Experience

Cloud, DevOps & MLOps Home Lab

Sep 2026 - Present

Independent projects | Toronto, Canada

- Set up Kubernetes environments on my own server and AWS to run personal applications and infrastructure services.
- Configured Traefik and Nginx reverse proxies and investigated DNS, HTTPS, service routing, and container networking.
- Built GitHub Actions workflows for testing, Docker image builds, publishing, and deployment.
- Ran YOLOv12 with NVIDIA Triton and Qwen3:8B with vLLM in separate pods, exploring how to share GPU resources between workloads.
- Used Prometheus, Grafana, Loki, Tempo, and OpenTelemetry to inspect metrics, logs, and traces and investigate performance issues.

Cloud / Backend Development Intern

Jun 2024 - Oct 2024

Payam Pardaz | Sadra Cloud Team | Isfahan, Iran

- Developed and tested Go backend services in a microservices environment using Docker and Linux.
- Implemented interchangeable HashiCorp Vault and in-memory secret storage for applications.
- Configured MOSN as a proxy between containerized services and tested request routing.
- Used Linux tools, Docker logs, and network checks to investigate connectivity and configuration issues during local deployment and integration testing.

Certifications

AWS Certified Cloud Practitioner | Oct 2026

AWS Certified AI Practitioner | Sep 2026

Selected Projects

Manisa
Sep 2026 - Present

Business management platform

- Worked on an application that brings day-to-day service business operations and database-derived reports into one place.
- Set up GitHub Actions to automate application delivery and keep deployment steps consistent.
- Moved the application from my Hetzner server to AWS EC2 and EKS.

Local AI Inference & Computer Vision
Sep 2026 - Present

Personal AI / MLOps projects

- Served Qwen3:8B through vLLM and connected the model endpoint to personal projects.
- Used NVIDIA Triton to serve YOLOv12 for object-detection experiments, inspecting visual inputs and model outputs.

Career
Oct 2026 - Present

AI-powered career management

- Used embeddings and Retrieval-Augmented Generation (RAG) to support resumes and cover letters tailored to different roles.
- Built workflows for managing application materials and tracking applications and progress.

DuoCardsDict
May 2026 - Sep 2026

Vocabulary learning platform

- Built a vocabulary workspace around words collected from DuoCards.
- Used vector embeddings to represent words and explore their relationships.
- Added dictation exercises in different modes to support spelling and vocabulary practice.

Dockerized Secrets Service
Jun 2024 - Oct 2024

Go | HashiCorp Vault

- Kept secret-storage implementations separate from application logic so either backend could be used.
- Used Docker Compose to run the application and Vault together for development and testing.

Education & Teaching

Bachelor of Science in Computer Engineering
2021 - 2025

Isfahan University of Technology

- GPA: 89/100. Coursework in networks, operating systems, databases, software engineering, and IT project management.

Teaching Assistant | Computer Engineering
Mar 2024 - Jan 2026

Isfahan University of Technology | Isfahan, Iran

- Supported networking, IT management, technical presentation, and embedded-systems courses; guided Cisco labs and reviewed student assignments and projects.
